Preface	V
Introduction	1
Baruch S. Blumberg.....	1
Part I. Organic Material in Space and Habitable Zones	5
1 From Molecular Clouds to the Origin of Life	7
Pascale Ehrenfreund and Karl M. Menten	7
1.1 The Search for Large Organic Molecules in Dense Clouds	10
1.1.1 The Search for Amino Acids in the Interstellar Medium.....	10
1.1.2 Organic Molecules in our Galactic Center	11
1.2 Molecules in Protoplanetary Disks	13
1.3 Diffuse Interstellar Clouds	14
1.4 The Evolution of Organic Molecules During Solar System Formation	15
1.4.1 Comets.....	16
1.4.2 Meteorites.....	17
1.5 Implications for the Origin of Life on Earth.....	17
1.6 Conclusions.....	19
1.7 References	21
2 The Diversity of Extrasolar Planets Around Solar Type Stars	25
Stéphane Udry and Michel Mayor	25
2.1 Detections: Milestones and Recent Announcements.....	26
2.2 Very Recent ELODIE and CORALIE Detections	29
2.3 Observed Properties of Extrasolar Planets	31
2.4 Hot Jupiters	32
2.4.1 Hot Jupiters: Direct Detections	33
2.5 The Mass Function of Substellar Companions.....	35
2.6 Orbital Element Distributions: Traces of Planet Formation	36
2.6.1 The Distribution of Periods	37
2.6.2 The Distribution of Eccentricities	37
2.7 Metal Enrichment of Stars Bearing Planets.....	39

VIII Contents

2.8 Summary and Future Perspectives 40
2.9 References 43

3 Habitable Zones in Extrasolar Planetary Systems..... 47

Siegfried Franck, Werner von Bloh, Christine Bounama, Matthias Steffen, Detlef Schönberner and Hans-Joachim Schellnhuber..... 47

3.1 Models for Calculating the HZ in the Solar System..... 49
3.2 HZ Around Other Main Sequence Stars..... 51
3.3 Conclusions..... 54
3.4 References 55

4 Viable Transfer of Microorganisms in the Solar System and Beyond 57

Gerda Horneck, Curt Mileikowsky, H. Jay Melosh, John W. Wilson, Francis A. Cucinotta and Brett Gladman 57

4.1 Scenario of Interplanetary Transfer of Life Within the Solar System..... 57
4.2 Survival of the Escape Process..... 59
4.3 Survival of the Interplanetary Transfer Phase 60
4.3.1 Space Environment of Interest..... 60
4.3.2 Approaches to Studying the Biological Effects of Space..... 62
4.3.3 Biological Effects of the Vacuum of Space 63
4.3.4 Biological Effects of Galactic Cosmic Radiation..... 64
4.3.5 Biological Effects of Extraterrestrial Solar UV Radiation..... 67
4.3.6 Bacterial Survival During Long-Term Dormancy..... 67
4.3.7 Combined Effects of the Complex Matrix of Space Parameters 68
4.4 Survival of the Landing Process..... 69
4.5 Conclusions: On the Likelihood of Interplanetary Transfer of Life as a Mode of Distribution of Life Throughout the Solar System 69
4.6 Outlook: On the Likelihood of Transport of Viable Microorganisms Between Solar Systems..... 71
4.7 References 74

Part II Water and Life..... 77

5 Water, the Spring of Life 79

André Brack..... 79

5.1 Water as a Diffusion Milieu 79
5.2 Water as a Selective Solvent 81
5.3 Water as a Clay Producer..... 82
5.4 Water Structures the Biopolymers 82
5.5 Water as a Driving Power for Chemistry..... 84
5.6 Water as a Heat Dissipator 85
5.7 Life Without Water: The Case for Titan..... 86
5.8 Conclusion 87
5.9 References 88

6	Geomorphological Record of Water-Related Erosion on Mars	89
	Ralf Jaumann, Ernst Hauber, Julia Lanz, Harald Hoffmann and Gerhard Neukum	89
6.1	Outflow Channels	90
6.2	Valley Networks.....	91
6.3	Periglacial and Permafrost Landforms.....	94
6.3.1	Debris Flow and Terrain Softening	94
6.3.2	Ground Ice	95
6.3.3	Rampart Craters.....	95
6.3.4	Polygons	96
6.3.5	Thermokarst.....	96
6.4	Glacial Landforms.....	97
6.4.1	Eskers and Moraines	97
6.5	Volcano Ice Interactions	98
6.6	Chronology of Martian Erosional Processes.....	98
6.7	Standing Water	100
6.8	Origin of Martian Surface Erosion and Implications for the Palaeoclimate	101
6.9	References	105
7	Europa's Crust and Ocean: How Tides Create a Potentially Habitable Physical Setting	111
	Richard Greenberg, B. Randall Tufts, Paul Geissler and Gregory V. Hoppa.....	111
7.1	Tidally Driven Geology and Geophysics.....	113
7.1.1	Tidal Heating	114
7.1.2	Tidally Driven Rotation.....	114
7.1.3	Tidal Stress on the Ice Crust	115
7.1.4	Chaotic Terrain.....	117
7.2	A Habitable Setting	118
7.3	References	122
8	Permafrost Model of Extraterrestrial Habitat	125
	David A. Gilichinsky.....	125
8.1	The Importance of Permafrost.....	125
8.2	Parameters of Permafrost Microbial Habitat.....	127
8.2.1	Temperature.....	127
8.2.2	Iceiness and Unfrozen Water	129
8.2.3	Ice and Permafrost as a Habitat	130
8.2.4	Gases and Supercooled Water	130
8.2.5	Age and Radiation	131
8.3	Biodiversity in Permafrost.....	135
8.4	How Long the Life Might Be Preserved	138
8.5	The Perspectives for Future Studies	138
8.6	References	140

9 Microbial Life in Terrestrial Permafrost: Methanogenesis and Nitrification in Gelisols as Potentials for Exobiological Processes	143
Dirk Wagner, Eva Spieck, Eberhard Bock and Eva-Maria Pfeiffer.....	143
9.1 Permafrost Soils and Active Layer	143
9.2 Microbial Life under Extreme Conditions.....	145
9.3 Microbial Key Processes	145
9.3.1 Methanogenesis	148
9.3.2 Nitrification.....	148
9.4 Methods for Analogue Studies of Microbial Processes in Terrestrial and Extraterrestrial Habitats	149
9.4.1 Methanogenic and Nitrifying Populations	150
9.4.2 <i>In situ</i> Activity.....	152
9.4.3 Isotopic Analysis: Carbon Fractionation via Microbial Processes in Permafrost	154
9.4.4 Simulation Experiments.....	155
9.5 Conclusion and Future Perspectives.....	155
9.6 References	156
10 Life in Cold Lakes	161
Erko Stackebrandt and Evelyne Brambilla.....	161
10.1 Source of Samples and DNA Analyses	162
10.2 The Rich Diversity of Bacteria and Archaea.....	163
10.3 Conclusions.....	167
10.4 References	168
11 Hyperthermophilic Microorganisms	169
Karl O. Stetter	169
11.1 Biotopes of Hyperthermophiles	169
11.1.1 Terrestrial Biotopes.....	170
11.1.2 Marine Biotopes.....	171
11.2 Phylogeny of Hyperthermophiles	171
11.3 Taxonomy of Hyperthermophiles.....	174
11.4 Strategies of Life and Environmental Adaptations of Hyperthermophiles	174
11.4.1 General Metabolic Potentialities	174
11.4.2 Physiological Properties	175
11.4.2.1 Terrestrial Hyperthermophiles.....	175
11.4.2.2 Marine Hyperthermophiles	180
11.5 Conclusions: Hyperthermophiles in the History of Life.....	182
11.6 References	183
12 Halophilic Microorganisms	185
Hans Jörg Kunte, Hans G. Trüper and Helga Stan-Lotter.....	185
12.1 Adaptation to Saline Environments.....	185
12.1.1 Salt-in-Cytoplasm Mechanism.....	186

12.1.2 Organic Osmolyte Mechanism..... 187
 12.1.2.1 Stress Protection by Compatible Solutes 187
 12.1.2.2 Compatible Solutes of Halophiles and Their Synthetic Pathways 188
 12.1.2.3 Compatible Solute Transport and Osmosensing..... 188
 12.2 Saline Terrestrial Environments and Their Inhabitants 189
 12.2.1 Distribution and Dating of Ancient Salt Sediments..... 190
 12.2.2 Subterranean Halophilic Microorganisms and Their Relation to
 Surface Halophiles 191
 12.2.3 Uncultivated Phylotypes 193
 12.2.4 Distribution, Origin and Dispersal of Haloarchaea 193
 12.2.5 Long-Term Survival 195
 12.3 Relevance to Astrobiology 196
 12.4 References 197

Part III Electromagnetic Fields, Radiation and Life 200

**13 Martian Atmospheric Evolution: Implications of an Ancient Intrinsic
 Magnetic Field..... 202**
 Helmut Lammer, Willibald Stumptner and Gregorio J. Molina-Cuberos 202
 13.1 Nonthermal Atmospheric Escape Processes..... 202
 13.1.1 Charge Exchange and Dissociative Recombination 203
 13.1.2 Atmospheric Sputtering 205
 13.1.3 Solar-Wind Interaction Processes..... 206
 13.1.4 Ionospheric Bubbles 207
 13.2 The Early Dense Martian Atmosphere 208
 13.2.1 The Quest for Water..... 208
 13.3 The Intrinsic Martian Magnetic Field..... 209
 13.3.1 The Ancient Martian Magnetosphere: Constraints for Atmospheric
 Escape 211
 13.4 Shielding of Hypothetical Primitive Martian Life Forms from
 Energetic Cosmic Particles and Radiation..... 212
 13.4.1 Cosmic Ray Particle Fluxes on the Surface of Ancient Mars 212
 13.5 Conclusions..... 215
 13.6 References 215

**14 The Ultraviolet Radiation Environment of Earth and Mars: Past and
 Present 218**
 Charles S. Cockell..... 218
 14.1 UV Radiation on Early Earth 218
 14.1.1 UV Radiation During the Archean 219
 14.1.1.1 Calculation of UV Radiation on Early Earth..... 219
 14.1.1.2 Atmospheric Absorbers and Effects on Archean Photobiology..... 221
 14.1.2 Biological Effects of High UV Radiation Flux..... 223
 14.1.2.1 The Oceans..... 223
 14.1.2.2 Intertidal and Terrestrial Habitats..... 223
 14.1.2.3 Ultraviolet Radiation Screening Compounds and Repair 224

14.1.2.4	Photosynthesis in the Archean	225
14.1.3	Beneficial Effects of High UV Radiation on Archean Earth?	226
14.2	The Ultraviolet History of Mars and Venus: An Exercise in Comparative Evolutionary Photobiology.....	227
14.3	Conclusions.....	229
14.4	References	229
15	Ultraviolet Radiation in Planetary Atmospheres and Biological Implications	232
	Petra Rettberg and Lynn J. Rothschild	232
15.1	Solar UV Radiation.....	232
15.2	Biological Effects of Solar UV Radiation.....	233
15.3	Biological UV Dosimetry.....	236
15.4	Experimental Determination of the Biological Effectiveness of Extraterrestrial Solar UV Radiation.....	238
15.5	Experimental Determination of the Photobiological Effects of Different Ozone Concentrations	240
15.6	Conclusions.....	240
15.7	References	242
16	Environmental UV Radiation: Biological Strategies for Protection and Avoidance.....	244
	David D. Wynn-Williams and Howell G.M. Edwards	244
16.1	Effects of UVR and Responses in Terrestrial Ecosystems	244
16.2	Techniques for Studying Microbes and Pigments <i>in situ</i>	245
16.2.1	Epifluorescence Microscopy	245
16.2.2	Raman Spectroscopy of Pigments and Other Compounds <i>in situ</i>	246
16.3	Screening Strategies	247
16.4	Quenching Strategies	249
16.5	Escape and Avoidance Strategies (Shade Adaptation).....	249
16.5.1	Epilithic Lichens.....	249
16.5.2	Endolithic Communities.....	250
16.5.3	Stromatolites	253
16.6	Strategies for Extreme UV on Early Earth and Mars	254
16.7	Panspermia and UV Avoidance	255
16.8	Diagnosis of Key Pigments on Earth and Mars	255
16.9	References	257
17	Life under Conditions of Ionizing Radiation.....	260
	Christa Baumstark-Khan and Rainer Facius.....	260
17.1	Space Radiation Environments.....	260
17.1.1	Galactic Cosmic Radiation (GCR).....	261
17.1.2	Solar Particle Radiation (SPR).....	262
17.1.3	Radiation Belts in Planetary Magnetic Fields.....	262
17.1.4	Modulation by Planetary Magnetic Fields, Atmospheres and Surfaces.....	263

17.2 Radiation Environments on Planets and Other Celestial Bodies.....263

17.2.1 Earth.....264

17.2.2 Mars264

17.2.3 Jupiter’s Moon Europa266

17.3 Measures of Ionizing Radiation267

17.3.1 Physical Measures267

17.3.2 Biologically Weighted Measures.....268

17.4 Interaction of Radiation with Biological Material268

17.4.1 Radiation Chemistry of Water.....269

17.4.2 DNA Damage and Cellular Repair Pathways271

17.5 Cellular Radiation Responses274

17.5.1 Radiation Sensitivity of Organisms.....275

17.5.2 Mutation Induction.....276

17.5.3 Factors Influencing Cellular Radiation Effects277

17.5.3.1 Dose Rate and Dose Fractionation.....277

17.5.3.2 Oxygen Pressure.....277

17.5.3.3 Chemicals as Radioprotectors or Radiosensitizers278

17.5.3.4 Metabolic Rate and Temperature.....278

17.5.3.5 Proliferation Rate.....278

17.6 The Chances of Life Surviving Space Radiation Conditions.....279

17.6.1 Interplanetary Transfer of Life.....279

17.6.2 Putative Habitats on Other Planets.....279

17.7 References281

Part IV Gravity and Life.....284

18 Gravi-perception and Gravi-response at the Cellular Level.....286

Richard Bräucker, Augusto Cogoli and Ruth Hemmersbach.....286

18.1 Protists.....286

18.1.1 Perception of Varied Acceleration286

18.1.2 Models of Gravi-perception.....288

18.1.3 Energy Considerations290

18.1.4 Gravisensory Channels.....291

18.2 Mammalian Cells291

18.2.1 Gravity Effects and Consequences291

18.3 Conclusions.....293

18.4 References293

19 Gravi-stimulated Effects in Plants296

Heide Schnabl.....296

19.1 Gravi-perception as the Primary Gravity-Sensing Mechanism.....298

19.1.1 Gravi-perception in Unicellular Plants.....298

19.1.2 Gravi-perception in Multicellular Plants.....299

19.1.2.1 Statocyte Polarity and Gravisensing299

19.1.2.2 The Plastid-Based Gravisensing301

19.2 The Gravity Signal Transduction Pathway.....302

XIV Contents

19.3 The Graviresponse: The Curvature of Organs.....303
19.3.1 Graviresponses in Unicellular Plants or Plant Systems.....304
19.3.2 Graviresponses in Multicellular Plants.....306
19.3.2.1 Modulation of Auxin-Induced Gravitropic Responses306
19.3.2.2 Modulation of the Polar Auxin Transport308
19.3.2.3 The Regulation of Cellular Elongation in Graviresponding Flanks.....308
19.4 References310

20 Gravitational Zoology: How Animals Use and Cope with Gravity.....314
Ralf H. Anken and Hinrich Rahmann.....314

20.1 Gravity as a Factor of Physical Restriction: A Brief History of
Evolutionary Challenges To Surmount It314
20.2 Gravity as a Cue for Orientation and Postural Control317
20.2.1 Gravi-perception in Unicellular Animals318
20.2.2 Gravi-perception in Multicellular Animals.....319
20.3 Behavior and Differentiation of Animals at Altered Gravity.....323
20.3.1 Invertebrates.....324
20.3.2 Vertebrates.....325
20.3.2.1 Amphibians, Reptiles, Birds325
20.3.2.2 Fish 326
20.4 Conclusion329
20.5 References330

Part V Complexity and Life334

21 Scaling Phenomena and the Emergence of Complexity in Astrobiology.....336
Juan Pérez-Mercader.....336

21.1 Astrobiology as the Realm of Emergence, Hierarchies and Scaling.....339
21.2 Implications of Power Law Behavior342
21.3 Exponents and Their Meaning343
21.4 Where and How Have Power Laws Been Used?.....344
21.5 Examples of Power Laws: From Cosmology to Paleontology345
21.5.1 Examples from Cosmology and Astrophysics346
21.5.2 Examples from Planetology.....349
21.5.3 Examples from Biochemistry.....351
21.5.4 Examples from Biology.....353
21.6 Conclusions.....357
21.7 References358

22 Molecular Self-Assembly and the Origin of Life.....360
Wolfgang M. Heckl.....360

22.1 Key Questions for the Emergence of Life360
22.2 Directed Molecular Self-Assembly.....361
22.3 Direct Microscopic Verification of Self-Assembled DNA Bases on
Mineral Template Surfaces.....363

22.4 Genetically Based Supramolecular Architectures from Self-Assembled DNA Bases Coding for Amino Acids367

22.5 Conclusion369

22.6 References370

23 Search for Morphological and Biogeochemical Vestiges of Fossil Life in Extraterrestrial Settings: Utility of Terrestrial Evidence.....372
 Manfred Schidlowski372

23.1 Paleontological Evidence373

23.1.1 Microbialites.....374

23.1.2 Cellular Microfossils375

23.2 Biogeochemical Evidence377

23.2.1 Sedimentary Organic Carbon as a Recorder of Former Life Processes.....378

23.2.2 ¹³C/¹²C in Sedimentary Organic Matter: Index of Autotrophic Carbon Fixation.....379

23.3 Conclusions and Outlook.....383

23.4 References383

Part VI Forthcoming Space Missions Relevant for Astrobiology386

24 Space Activities in Exo-Astrobiology388
 Bernard H. Foing.....388

24.1 Astrobiological Potential of Space Astronomy Missions388

24.1.1 Infrared Spectroscopy of Cosmic Dust and Organics.....388

24.1.2 The New Generation Space Telescope (NGST).....389

24.1.3 Exoplanets from Space: GAIA, COROT, EDDINGTON, KEPLER and DARWIN389

24.1.4 Global Life Signatures on Earth?390

24.2 Astrobiological Potential of Planetary Missions.....390

24.2.1 CASSINI HUYGENS.....390

24.2.2 STARDUST.....393

24.2.3 ROSETTA.....393

24.2.4 MARS-EXPRESS and Future Mars Missions.....393

24.2.5 Europa Missions.....394

24.2.6 Moon, Mercury, Formation of Planets and the Early Frustration of Life394

24.2.7 Space Exposure Experiments.....394

24.3 Conclusion: Roadmap for Astrobiology and Long-Term Space Exploration.....397

24.3.1 Experimenting for Life in the Universe.....397

24.3.2 Expanding Life in the Solar System.....397

Eva Spieck Institute of General Botany, Department of Microbiology, University of Hamburg, Ohnhorststrasse 18, 22609 Hamburg, Germany E-mail: spieck@mikrobiologie.uni-hamburg.de.....402
