

GMES Sentinel-2

Projekt-Status und Möglichkeiten der Zusammenarbeit

Name: Heinz Sontag

ASTRIUM SATELLITES
Earth Observation, Navigation & Science

DLR - Raumfahrt-Industrietage in Friedrichshafen
13./14. Mai 2009

All the space you need

This document is the property of Astrium. It shall not be communicated to third parties without prior written agreement. Its content shall not be disclosed.

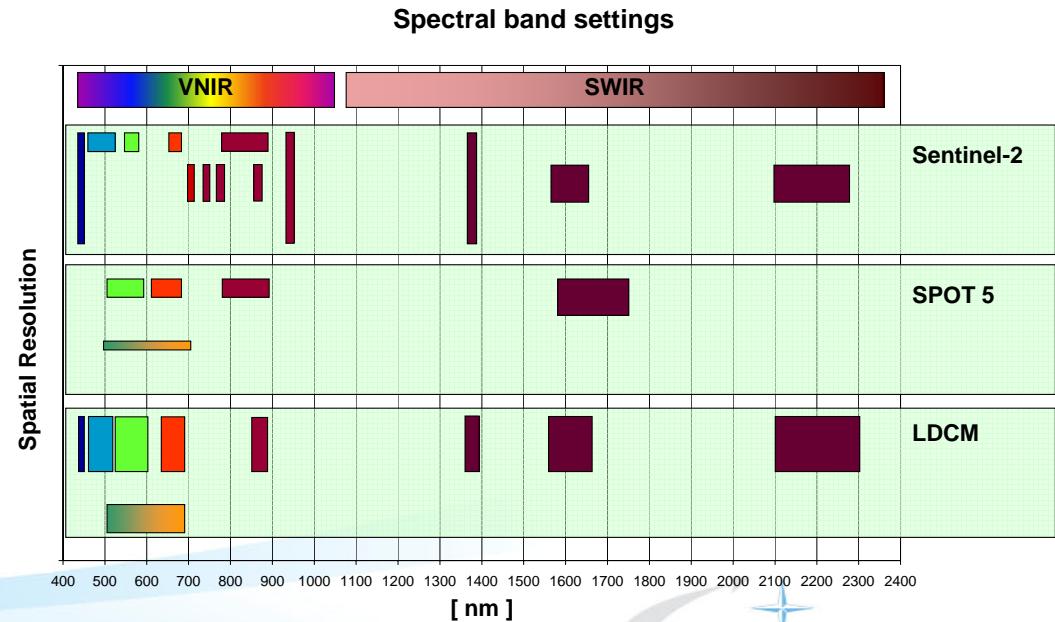

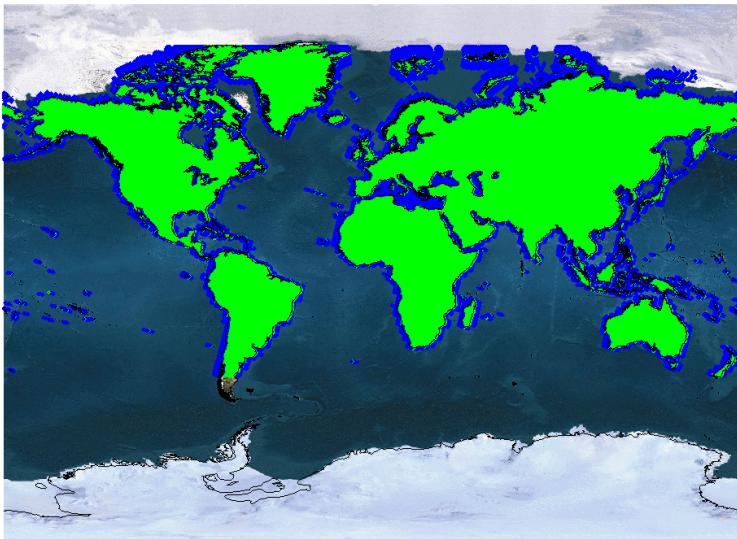

- GMES is an EC lead E.O. operational programme co-funded by ESA to ensure European independence for operational Earth monitoring.
- Sentinel-2 focuses at delivering operational GMES land & security services: global, systematic, medium/high resolution optical imagery with very high revisit.
- Sentinel-2 secures continuity & further enhancement of SPOT & Landsat-type multi-spectral data : land cover, land use, change detection maps and geophysical variables maps over a 15 years minimum period
- Total GMES budget currently >1 B€, covering development of 3 land and sea missions (Sentinel-1 to 3) with 2 satellites each, ground segment, and preparatory activities (S4 and S5) for atmospheric missions

Key requirements

- Global mapping of all land surfaces with up to 10 m spatial resolution in 13 multispectral bands, visible to shortwave infrared spectral range
- Image size: 290 km swath, up to 29.000 pixels per line
- Image data volume 800 GByte per day (compressed)
- Lifetime 7 years design qualification,
12 years for consumables

This document is the property of Astrium. It shall not be communicated to third parties without prior written agreement. Its content shall not be disclosed.

Key design features

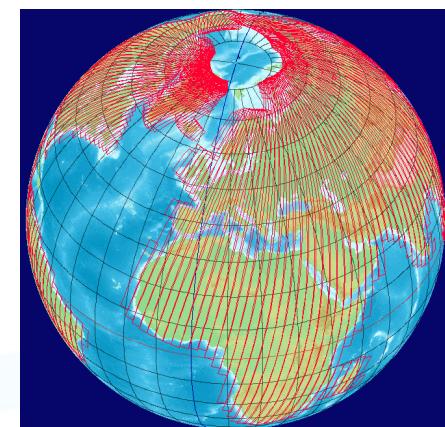

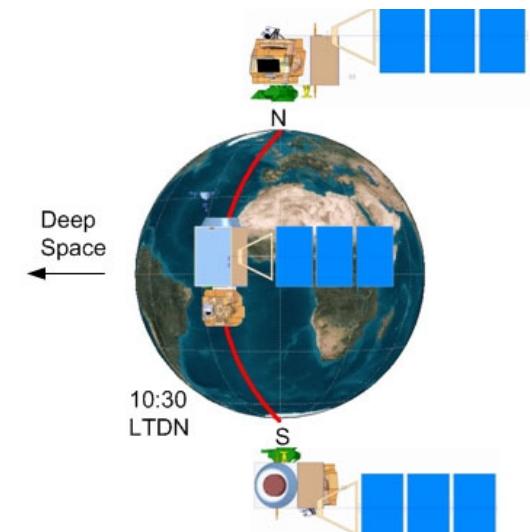

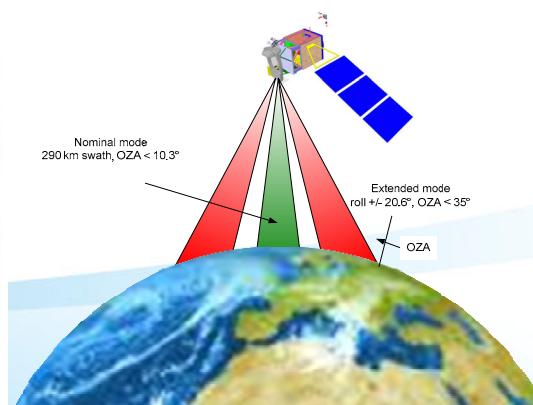

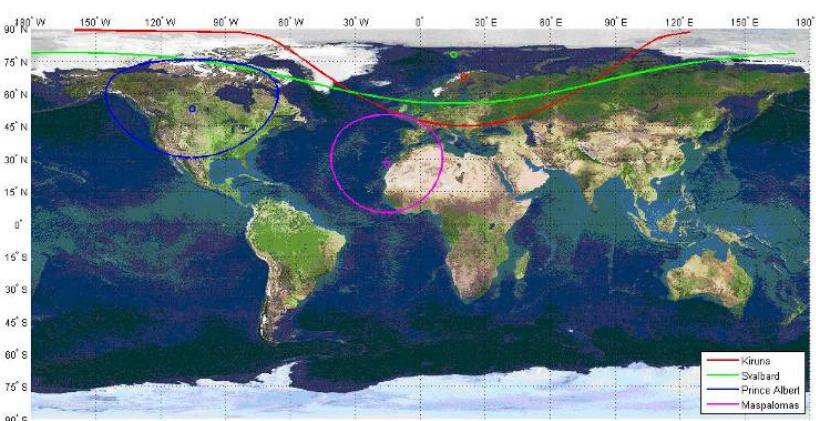

- **Polar Orbiting Satellite in a sun-synchronous orbit**

- altitude 786 km, 100 min/orbit
- image acquisition over all land surfaces on daylight side of orbit
- side-looking capability to access any point on Earth within 1-2 days
- 4 ground stations

- **Multispectral Instrument operating in pushbroom principle**

- filter based optical system
- low noise image compression techniques

This document is the property of Astrium. It shall not be communicated to third parties without prior written agreement. Its content shall not be disclosed.

Sentinel-2 Satellite Key Features

Overall Configuration

- | | |
|----------------|--|
| - Structure | Al frame/honeycomb |
| - Mass | 1.1 ton |
| - Dimensions | 3.4m x 1.8 m x 2.35 m |
| - Fuel | 117 kg Hydrazine |
| - Thermal Ctrl | Monopropellant
passive with deep
space radiators |

Attitude and Orbit Control

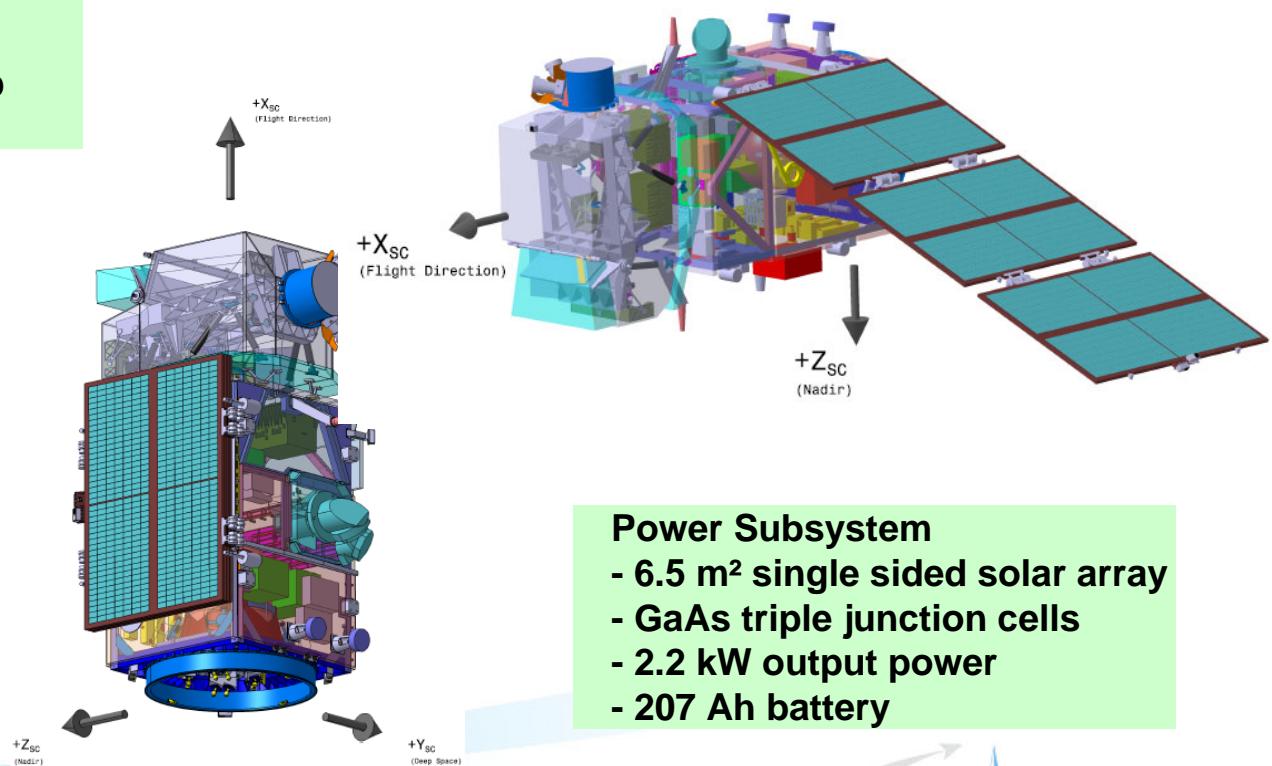

- Advanced APS Star Trackers for precision attitude measurement
 - High Performance Fiberoptic Gyro for precision rate measurements
 - dual band GPS receiver
 - Low noise reaction wheels for attitude control

Data handling Subsystem

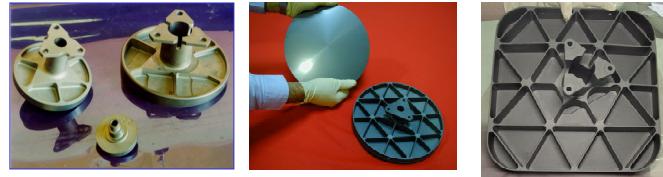

- 3 Tbit Flash memory
 - 520 Mbps effective X-band downlink system-
 - Laser Com Terminal Option

Power Subsystem

- 6.5 m² single sided solar array
 - GaAs triple junction cells
 - 2.2 kW output power
 - 207 Ah battery

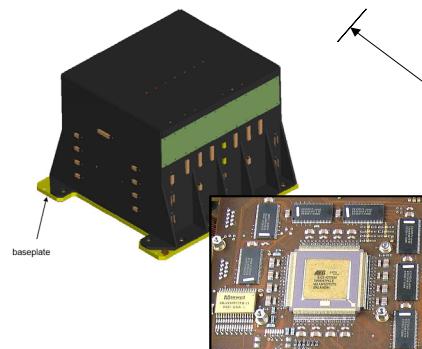

The Multi-Spectral Instrument

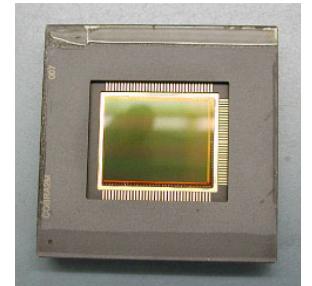

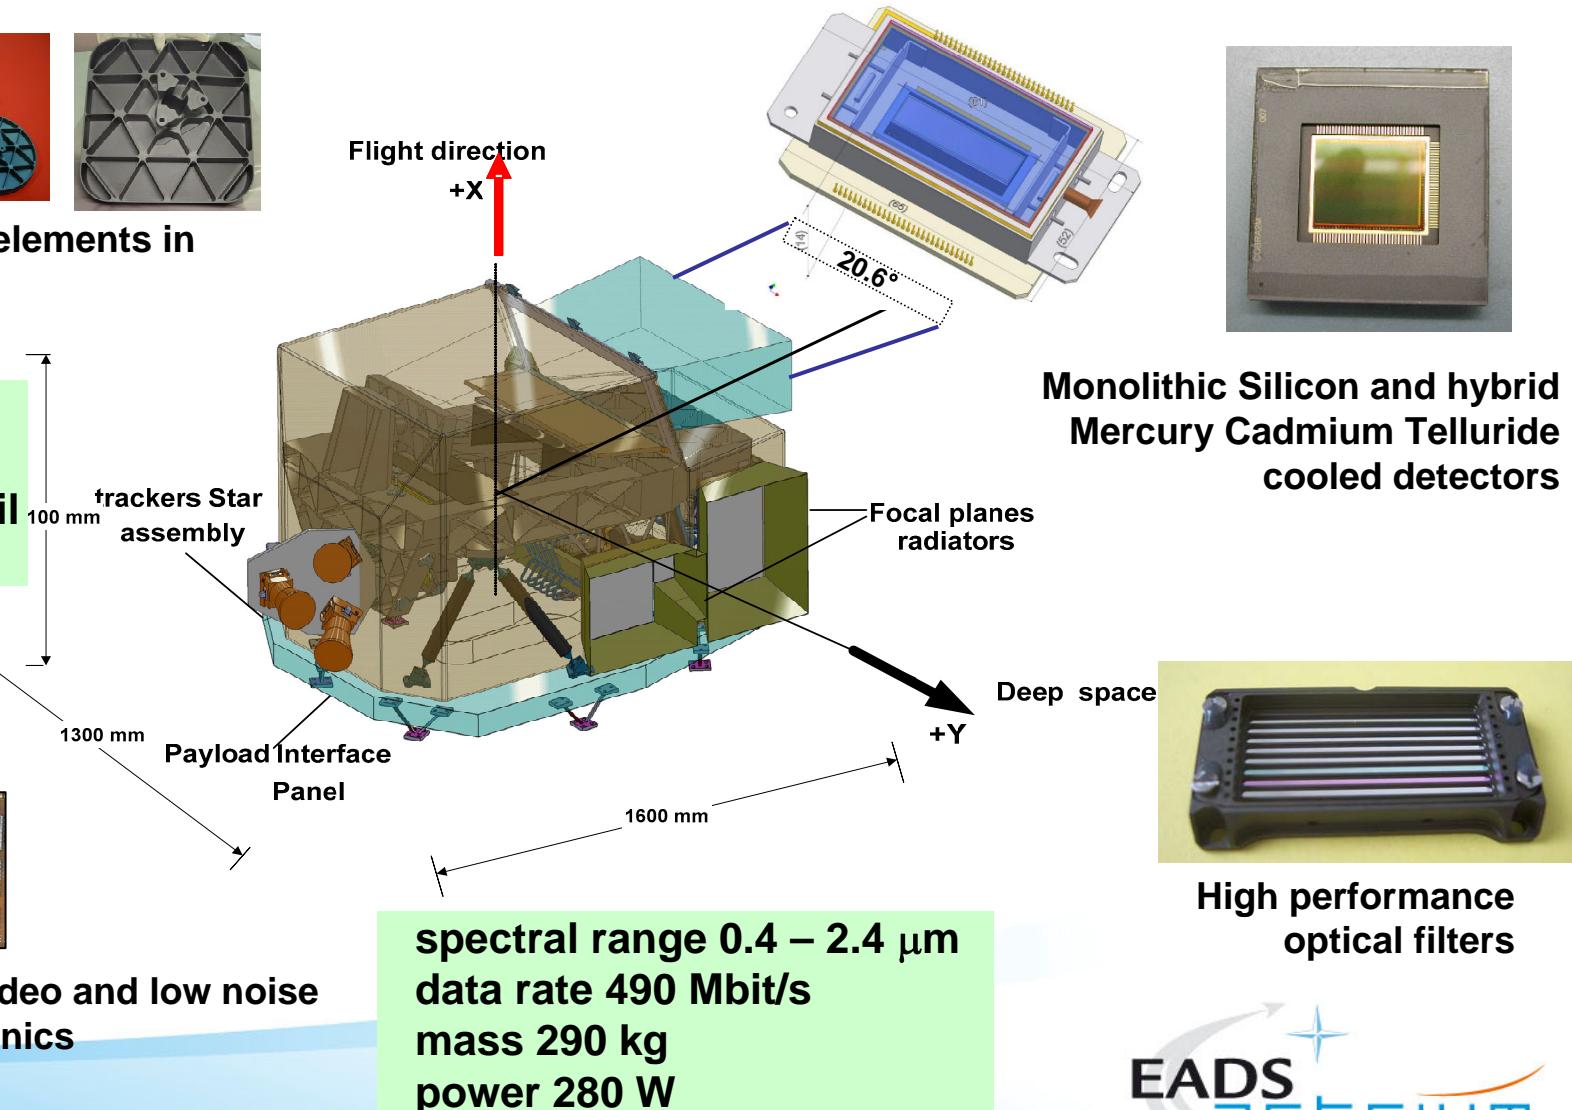

Structure and optical elements in SiC ceramics

**pushbroom sensor
optical FOV 20.6°
15 cm effective pupil
diameter**

**High performance video and low noise
compression electronics**

This document is the property of Astrium. It shall not be communicated to third parties without prior written agreement. Its content shall not be disclosed.

**Monolithic Silicon and hybrid
Mercury Cadmium Telluride
cooled detectors**

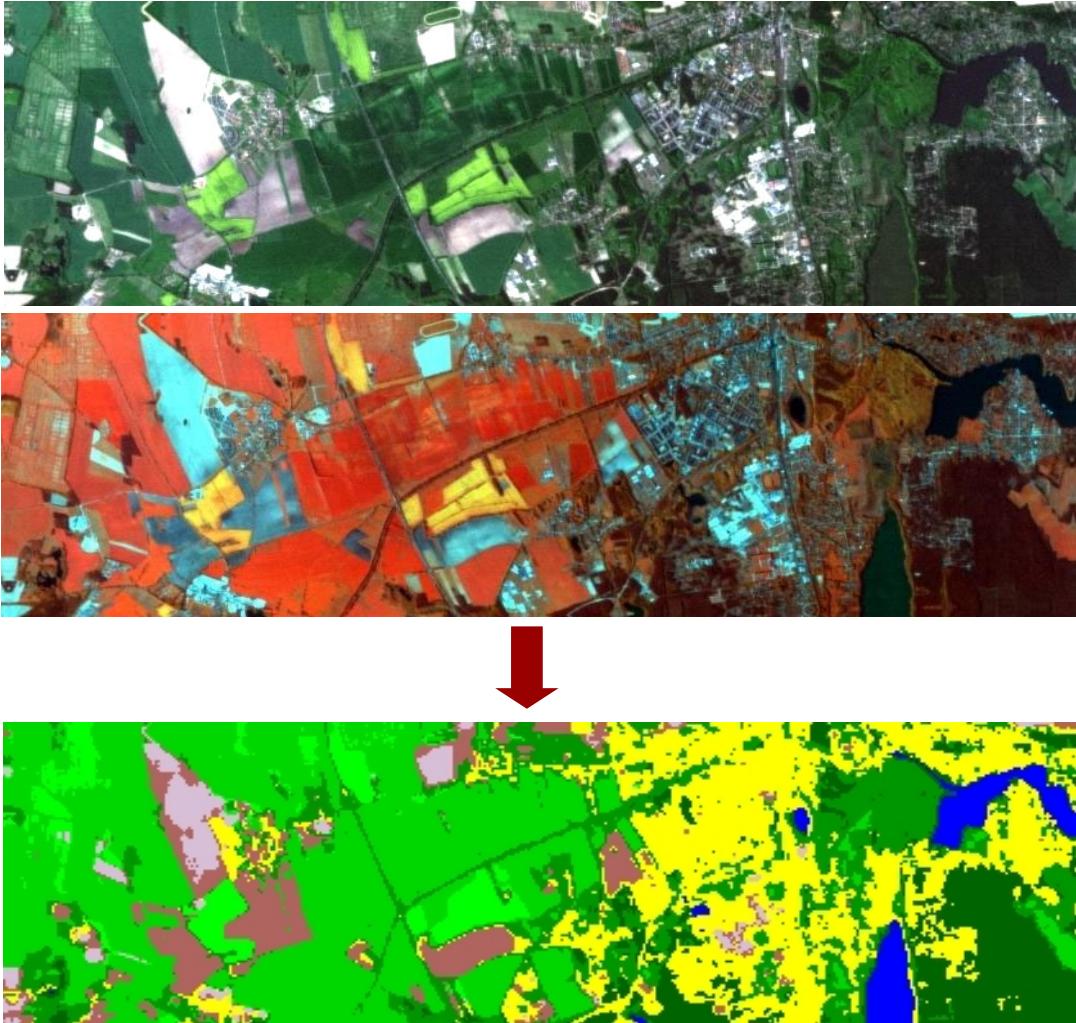

**High performance
optical filters**

Sentinel-2 products - Land Cover / Land Use

This document is the property of Astrium. It shall not be communicated to third parties without prior written agreement. Its content shall not be disclosed.

Simulated
Sentinel-2 images
(red/green/blue
bands)

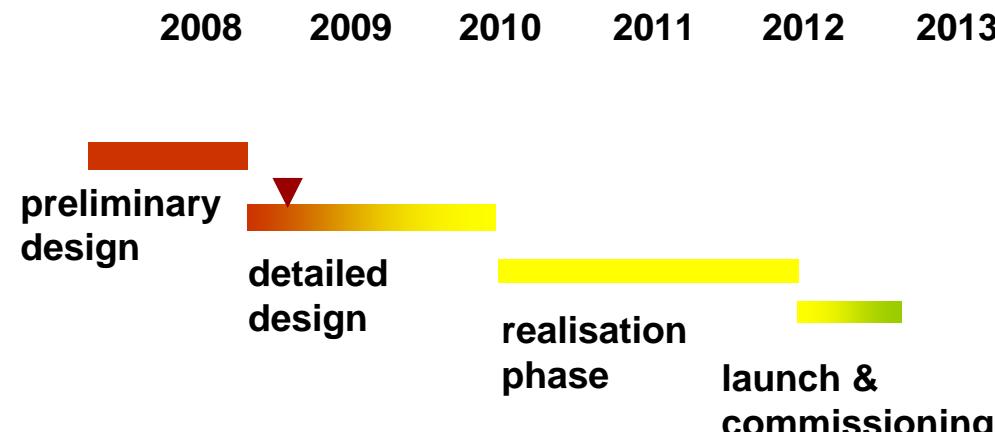

and near-infrared
/red/green

Yellow	Urban
Blue	Water
Dark Green	Forest 1
Medium Green	Forest 2
Purple	Bare soil1
Magenta	Bare soil 2
Red	Cultivated field 1
Light Green	Cultivated field 2

Programme Overview

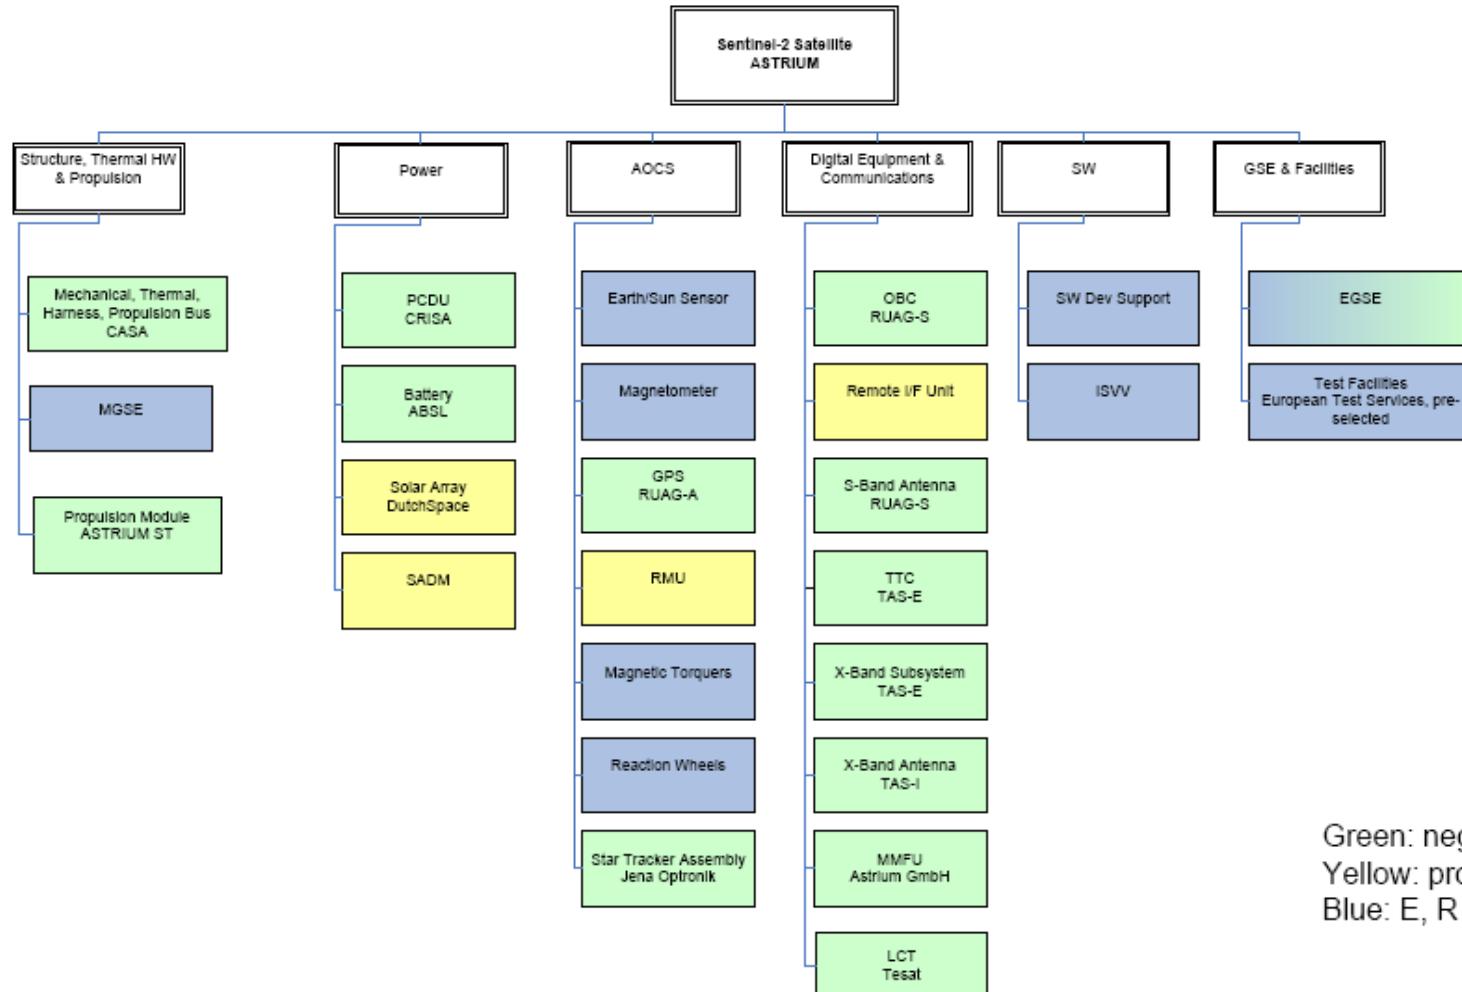

This document is the property of Astrium. It shall not be communicated to third parties without prior written agreement. Its content shall not be disclosed.

Sentinel-2 Prime Subcontractors

This document is the property of Astrium. It shall not be communicated to third parties without prior written agreement. Its content shall not be disclosed.

Sentinel-2 Status and German SME Involvement

■ Satellite Prime

- German SMEs involvement:
 - star trackers (Jena-Optronik),
 - Laser Communication Terminal (Tesa)

Astrium GmbH

■ Multispectral Instrument Prime

- procurement completed
- German SMEs involvement:
 - video-electronics (Jena-Optronik),
 - optical filter (Jena-Optronik),
 - power supply (ASP)

Astrium SAS

■ Common Procurements with EC

■ Reference design for Astrium Astrobotics harmonisations

Sentinel-2 Opportunities for German SMEs

This document is the property of Astrium. It shall not be communicated to third parties without prior written agreement. Its content shall not be disclosed.

■ Flight HW

- Magnetometer
- Magnetic Torquers
- Reaction Wheels

ITT on EMITS
ITT on EMITS
ITT expected May 2009

■ Flight SW

- SW Support
- ISVV

ITT expected July 2009
ITT expected July 2009

■ Ground Support

- RF SCOE
- Power SCOE
- AIT Operations Support

ITT expected June 2009
ITT expected June 2009
2011 -2012

Sentinel-2 Contact persons

■ Head of Project

- Dr. Heinz Sontag
- Tel: +49 7545 8 4980
- Email: Heinz.Sontag@astrum.eads.net

■ System Engineer

- Mario Welsch
- Tel: +49 7545 8 9083
- Email: Mario.Welsch@astrum.eads.net

■ Procurement

- Christian Stelter
- Tel: +49 7545 8 5718
- Email: Christian.Stelter@astrum.eads.net
